Zebrfish model of $MLL$ leukemogenesis: implication for fish favorable model of $MLL$-related leukemia development

Direttore della Scuola: Ch.mo Prof. Giuseppe Basso
Supervisore: Ch.mo Prof. Giuseppe Basso

Dottorando: Giuseppe Germano

31 Gennaio 2008
# Table of contents

Introduzione 1  
Introduction 3  

CHAPTER 1  
*MLL* an unusual promiscuous oncogene  
1.1 Clinical features of leukemias with *MLL* translocations 7  
1.2 MLL, MLL fusion proteins and leukemogenesis 9  
1.3 Two consecutive immunophenotypic switches in a child with MLL rearranged acute lymphoblastic leukemia 13  
*General references* 19  

CHAPTER 2  
Panhandle PCR approaches and the *ARMC3* gene  
2.1 Panhandle PCR approaches 28  
2.2 Characterization of genomic breakpoints in secondary leukemias by panhandle PCR approaches 33  
2.3 Cryptic, complex *MLL, AF10, ARMC3* rearrangement in secondary AML disrupts mammalian armadillo homologue 44  
*General references* 59  

CHAPTER 3  
Zebrafish and MLL leukemogenesis  
3.1 Zebrafish as a model system for hematopoiesis and leukemia 62  
3.2 Cloning and characterization of the zebrafish *mll* ortholog 64  
*General references* 79
